Table 1: `Outlets` for `UAffinitiesComponent`

TODO: to do!

Table 2: `Outlets` for `ULevelComponent`

GetBaseExpYield	
▶ Before	`const float OriginalYield`, `float& ReturnedYield`
▶ After	`const float OriginalYield`, `const float ReturnedYield`

GetCXP	
▶ Before	`const uint32 OriginalCXP`, `int32& ReturnedCXP`
Note:	`ReturnedCXP` is `int32&` instead of `uint32&` for Blueprint compatability.
▶ After	`const uint32 OriginalCXP` `const int32 ReturnedCXP`
Note:	`ReturnedCXP` is `const int32` instead of `const uint32` for Blueprint compatability.

Continued on next page

Table 2: `Outlets` for `ULevelComponent` (Continued)

GetExpYield	
▶ Before	`const float OriginalYield`, `float& ReturnedYield`, `const uint16 DefeatedLevel`, `const uint16 VictoriousLevel`
Note:	"Defeated" and "Victorious" levels are provided for flexibility (e.g., in case you want to yield exp differently based on level difference, although technically you could always back-calculate the level difference based on the equation and `OriginalYield`).
▶ After	`const float OriginalYied`, `const float ReturnedYield`, `const uint16 DefeatedLevel`, `const uint16 VictoriousLevel`
Note:	"Defeated" and "Victorious" levels are provided for symmetry with respect to the `Before` delegate (since `ReturnedValue` is already calculated, I can't think of why you would need them, but you never know!).

GetMaxLevel	
▶ Before	`const uint16 DefaultMax`, `int32& AttemptedMax`
Note:	`DefaultMax` is defined in the code. It should normally be 100, but may change for certain subclasses (e.g., a `UBossLevelComponent` may have a max of 200 instead). `AttemptedMax` is `int32&` instead of `uint16&` for Blueprint compatability.
▶ After	`const uint16 DefaultMax` `const int32 ReturnedMax`

Continued on next page

Table 2: `Outlets` for `ULevelComponent` (Continued)

GetMinLevel	
▶ Before	`const uint16 DefaultMin`, `int32& AttemptedMin`
Note:	`DefaultMin` is defined in the code. It should normally be 1, but may change for certain subclasses (e.g., a `UEggLevelComponent` may have a min of 0 instead for whatever reason). `AttemptedMin` is `int32&` instead of `uint16&` for Blueprint compatability.
▶ After	`const uint16 DefaultMin` `const int32 ReturnedMin`
Note:	`ReturnedCXP` is `const int32` instead of `const uint32` for Blueprint compatability.

GetBaseExpYield	
▶ Before	`const float OriginalYield`, `float& ReturnedYield`
▶ After	`const float OriginalYield`, `const float ReturnedYield`

SetBaseExpYield	
▶ Before	`const float OldYield`, `float& AttemptedYield`
▶ After	`const float OldYield` `const float NewYield`

SetCXP	
▶ Before	`const uint32 OldCXP`, `int32& AttemptedCXP`
Note:	`AttemptedCXP` is `int32&` instead of `uint32&` for Blueprint compatability.
▶ After	`const uint32 OldCXP` `const uint32 NewCXP`
Note:	`UStatsComponent` subscribes to this in order to change stats on level change.

Table 3: `Outlets` for `UStatsComponent`

RandomizeStats	
▶ Before	`const EStatEnum TargetStat`, `const FStatRandParams OriginalParams`, `FStatRandParams& ParamsToBeUsed`
▶ After	`const EStatEnum TargetStat`, `const FStatRandParams OriginalParams`, `const FStatRandParams UsedParams`
Note:	The `EStatEnum` is not the acutal `FStat`. To get the `FStat` (such as `FHealth`), use `UStatsComponent::GetStat(EStatEnum)`

RecalculateStats	
▶ Before	`const EStatEnum TargetStat`, `const bool bResetCurrent`, `const float OriginalCurrent`, `const float OriginalPermanent`
▶ After	`const EStatEnum TargetStat`, `const bool bResetCurrent`, `const float OriginalCurrent`, `const float OriginalPermanent`
