UDependentEffectComponents add common, cross-class functionality to other effects. Any UDependentEffectComponent:

- has an Owner that it's dependent upon.
- <u>should</u> be added just after its **Owner** is added. See how to attach below.
- <u>should</u> be destroyed just before its **Owner** is destroyed. This should happen via destroy and unregister. See below.
- follows its Owner's Silence and Unsilence.
- returns its Owner's Priority, Stacks, MaxStats, Priority, and ShouldApplyEffect.
- is not visible to UI.

0.0.1 Concrete Example

For example, both <code>UBerserkerGene</code> (a <code>UMutation</code>) and <code>UFullBloom</code> (a <code>UPositiveAura</code>) modify stats. Despite being different inheritance hierarchically, they do pretty similar things. They utilize <code>UPermStatMod</code>. For this example, let's use

To attach UPermStatMod to UBerserkerGene, add the following to UBerserkerGene::OnComponentCreated:

```
Super::OnComponentCreated();
ADD_COMPONENT(UPermStatMod, PermStatMod, GetOwner())
PermStatMod->SetOwner(this);
# Do some customization here, such as setting Dependent variables
```

You can also initialize things on the UPermStatMod side of things. For example, if you wanted to make sure there were stats attached to the new owner:

```
// Careful! Squirrels everywhere...
     if (NewOwner != nullptr)
3
        // Get StatsComponent
        SEARCH_FOR_COMPONENT_OR_DESTROY(UCombatStatsComponent, StatsComponent,
           NewOwner->GetOwner(), true)
        // No stats component?
        if (StatsComponent == nullptr)
        {
           UE_LOG(LogTemp, Warning, TEXT("No UCombatStatsComponent found for PermStatMod!
11
              This is required *before* the Owner is set."))
           return;
        }
13
     }
14
```

```
// This also calls ApplyEffect
Super::SetOwner(NewOwner);
```

Finally, when you destroy UBerserkerGene, make sure you also destroy UPermStatMod:

```
void UBerserkerGene::OnComponentDestroyed(bool bDestroyingHierarchy)
{
    PermStatMod->DestroyComponent();
    Super::OnComponentDestroyed(bDestroyingHierarchy);
}
```

Table 1: All UDependentComponents currently implemented and tested.

Dependent	Short Description	Implemented via	Priority	Note
PermStatMod	Modifies according to its TArray of FStatMods.	AfterRecalculateStats	Dependent	See, e.g., UBerserkerGene.
